RESTAURANTSPEC SEAMLESS ANTIMICROBIAL FLOORING SYSTEMS

Your food service establishment's floors are a reflection of your business. You've worked hard to gain the trust of patrons by creating a pleasurable service experience. What your restaurant looks like not only creates an inviting atmosphere, but sets a precedent amongst your competitors and increases employee morale.

Protective Industrial Polymers' RestaurantSpec line of floor coating systems have been specifically developed to provide a safe, long-lasting, durable and aesthetically-pleasing foundation for your restaurant or food service operation.

RestaurantSpec Seamless Antimicrobial Flooring Systems have been formulated to withstand even the highest degree of food service-related wear and tear. From superior impact and thermal-shock strength to aggressive wear and abrasion resistance, these flooring systems can take a beating while continuing to perform for years to come.

Achieving Comprehensive, Redundant Antimicrobial Protection

The key to achieving comprehensive antimicrobial protection is to prevent the growth of microorganisms throughout the floor system and deep within the concrete substrate.

With RestaurantSpec Seamless Antimicrobial Flooring Systems you are achieving multiple, dense layers of antimicrobial protection and a total system that penetrates up to 6" deep into the concrete substrate. No other manufacturer's process can even come close to this kind of redundant antimicrobial protection.

Our antimicrobial additives are integral key ingredients in our products, not merely a surface treatment. All products that make up RestaurantSpec systems are protected against bacterial and fungal growth. The antimicrobial properties of these products will remain effective for the life of the system, even after repeated washings, sanitizations and decontaminations.

When installed by a Protective Industrial Polymers' recognized installer, you are not only getting the most comprehensive antimicrobial floor system solution, but one that is properly installed and certified. All of our RestaurantSpec systems are verified by a PIP technical representative and a Certificate of Antimicrobial Treatment is issued.

RestaurantSpec Flooring Systems Features:

- Thermal shock resistance from frequent wash downs
- Seamless, no grout lines
- Safe, non-slip surfaces
- Easy to clean and maintain
- Lower life cycle costs
- Vast array of colors & blends to match color scheme

Restaurant owners and operators require kitchen, preparation and dining areas that are safe, hygienic and aesthetically-pleasing. RestaurantSpec floors have been specifically developed to not only withstand the daily rigors of food service operations, but also provide a comprehensive approach to controlling microbe growth, as well as offer enhanced safety benefits.

- **50% Greater Wear**

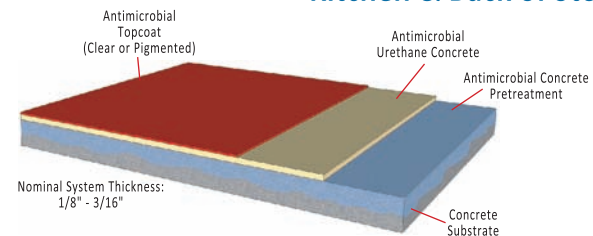

- **Lower Maintenance Costs**

- **Longer Service Life**

- **Repeatable Textures**

RestaurantSpec decorative floor coating systems can be enhanced with PIP's proprietary Gloss-Grip Technology. This additive greatly enhances both the safety and wear characteristics of your floor coating system while retaining a slip-resistant, yet high-gloss, finish that is easy to clean and maintain. These systems not only exhibit longer service lives; they help you save money by reducing maintenance costs.

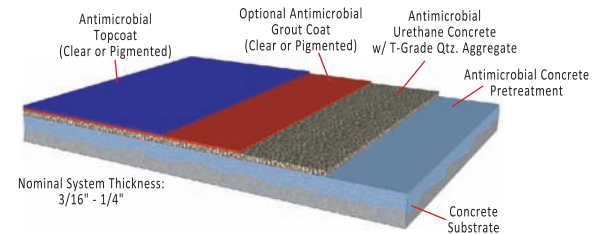

Kitchen & Back of Store Flooring Systems

RestaurantSpec ST

Non-Textured Antimicrobial Seamless Flooring System

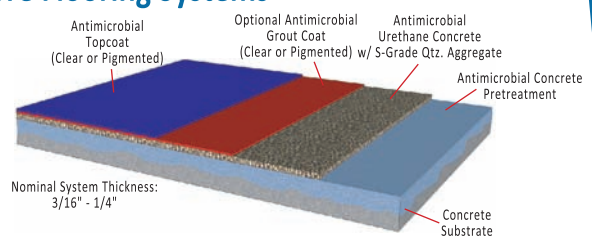

A high-performance smooth-finish antimicrobial coating system formulated for use in kitchen or food preparation areas requiring a smooth finish that is easy to mop clean, resistant to thermal cycling, chemicals and kitchen oils and grease.
