Shock-Resistant Mortar Flooring System

Texture: T30

System Description:

A urethane concrete mortar system consisting of a self-priming, trowel grade, thermal shock-resistant urethane concrete overlay. This monolithic system exhibits thermal expansion rates similar to that of concrete, making it an ideal choice for heavy-duty areas exposed to thermal cycling from hot and cold-water washdowns.

System Advantages:

- Self-priming
- Self-leveling
- Virtually odorless
- Monolithic, single-step system
- Durable, heavy-duty system
- Improved moisture tolerance
- Excellent thermal-shock resistance up to 250°F
- Easy to clean and maintain

System Installation Overview:

1. Apply PIP UC-TG trowel grade urethane concrete system and allow to cure
