High-Performance Mortar Flooring System

Texture: Variable*

* Alternate system textures available

System Description:

A heavy-duty mortar system consisting of an epoxy primer followed by an application of a trowel-applied epoxy mortar. The system is then grout coated with an epoxy grout material and then coated with a high-build epoxy. An aliphatic urethane topcoat completes the system. This mortar system will resurface badly damaged concrete to a new, more durable surface. This system is ideal for heavy-use areas exposed to advanced abuse and forklift traffic.

System Advantages:

- Very durable
- Excellent chemical resistance
- Resurfaces damaged concrete substrates
- Very good impact and abrasion resistance
- Available in a wide array of colors
- Alternate system textures available (Satin, Gloss, GlossGrip, DiamondWear)

System Installation Overview:

1. Apply PIP 1000 CR epoxy primer to properly prepared substrate and allow to cure
2. Apply PIP 3600 EM epoxy mortar system and allow to cure
3. Apply PIP 1000 Grout and allow to cure
4. Apply PIP 1000 HB epoxy and allow to cure
5. Apply PIP 2000 UR urethane and allow to cure
